Micro POS & Business Manager (User Guide & Setup Manual)

Thank you for purchasing Micro POS & Business Manager! This guide walks you through installing the application, configuring your store units, managing cash/credit sales, and tracking daily expenses completely offline.

I. Installation Guide (Android APK)

Because this app is distributed directly as an APK file, follow these steps to install it on your Android device:

1. **Download the APK** file to your Android smartphone or tablet.

2. Open your device's Files / **Downloads** folder and tap on the `.**apk**` file.

3. If prompted with "**For your security, your phone is not allowed to install unknown apps from this source**"

- Tap **Settings** in the dialog.
- Enable "**Allow from this source**".
- Return to the previous screen and tap **Install**.

4. If a **Google Play Protect** prompt appears ("Unrecognized app"), tap "**More details**" followed by "**Install anyway**".

5. Tap **Open** to launch the app.

II. Onboarding & Multi-Store Setup

1. **First-Launch Onboarding**:

- When opening the app for the first time, you will be guided through the **Onboarding Screen**.
- Enter your user details, choose your preferred currency format (e.g., MZN, USD, EUR), and set up your **First Store** / **Branch**.

2. Adding Subsequent Stores:

- Once inside the app, go to the **Sidebar** > **Stores**> and then, you will add the **New Store**.
- Each store operates with its own isolated data (sales, credit orders, expenses, supplier records and financial statement), but all stores have an option to see the overall dashboard and financial statement.
- Switch between your registered stores at any time using the store selector in the top navigation bar.

III. Daily Operations: Sales & Checkout

1. Creating a Direct Sale:

- Navigate to the **Sales** interface.
- Add the items sold along with their quantities and prices.
- Proceed to finalize and close the sale.

IV. Credit Orders & Installment Tracking

1. Creating a Credit Order:

- On the order creation screen, switch to the **Credit Orders** tab.
- Select or register the customer(if is not registered yet).
- **Initial Deposit / Down Payment**: You can optionally record an initial down payment at the moment of sale, or register it with zero upfront payment.

2. Managing Active Credit Orders:

- Go to the **Credit Orders** screen.
- The top Counter Banner displays the total number and summary of pending credit orders.
- Tap any order in the list to view its complete transaction history, remaining balance, and client details.

3. Logging Payments & Debt Settlement:

Inside the selected credit order, tap to record incoming payments/installments and select the payment method used.

Automatic Migration: As soon as the remaining balance reaches zero (fully settled), the transaction automatically converts into a completed sale, adding the total amount to your **Finished Sales** records.

V. Expenses & Supplier Tracking

1. Recording Store Expenses:

- Navigate to **Expenses** > **Add Expense**.
- Provide a clear **Description** detailing what the expense was for (e.g., Restock inventory, Electricity bill, Transport).
- Enter the amount paid and assign it to the currently active store.

2. Supplier Association:

Register your **Suppliers** in the system to link them directly to specific purchase and operational expense entries for organized expense attribution.

VI. Financial Reports & Statements

1. Navigate to Reports / Financial Statements.

2. Filter your metrics by Daily, Weekly, Monthly, or Custom Date Range.

3. Review your consolidated operational performance:

- Gross Sales & Finished Revenue
- Pending Credit Balances
- Total Operating Expenses
- Net Profit / Loss

4. Tap **Export Statement** to generate and share a formatted financial summary.

VII. Data Privacy & Local Backup

100% Offline Storage: All your data, transactions, and client records reside securely inside your device's local database. No external cloud sync is required.

Database Backup: Periodically go to **Settings** > **Backup Data** to export a copy of your database to local storage, an SD Card, or your preferred external backup drive.
